

# The Final Report

Wally Yang, Tina Liang, Wei Zong, Chuwen Sun, Xingyu Yan

April 20, 2020

## 0.1 Database Description

### 1. ER-model of the Database Design

## 2. Relational Schema for the Database

The bold field refers to the primary keys of the relational schema

## 3. Levels of normalization for each table: All tables achieve BCNF.

## 4. Indices for the Database

We chose the Tree-based index for our BOOK table since the tree-based index is good for looking up values based on range tests. It will speed up our queries when we want to retrieve the book based on the range of the year or the range of the price. Also it is not too bad for looking up values based on equality tests, so it also can slightly speed up our queries when we are trying to look up books based on the titles, categories, authors, and publishers.

## 5. Views for the Database

- View A

Description: This view is able to show all the titles and their dates of purchase made by each customer. And this could be useful to make book recommendations for a customer by looking at his or her purchase history.

Relational algebra expression:

$$R1 \leftarrow PURCHASE \bowtie_{Customer=Email} Customer$$

$$R2 \leftarrow BOOK \bowtie_{Isbn=Book} R1$$

$$Result \leftarrow \pi_{Name, Title, Date} R2$$

```

1 CREATE VIEW CUSTOMER_P AS
2   SELECT C.Name, B.Title, P.Date
3   FROM BOOK AS B, PURCHASE AS P, CUSTOMER AS C
4   WHERE B.Isbn = P.Book AND P.Customer = C.Email

```

Sample output:

|                 |  |          |
|-----------------|--|----------|
| Luqman Finnegan | OCP:<br>Oracle9i Certification Kit   | 07/01/16 |
| Phebe Christian | SQL Server 2000<br>for Experienced DBA's   | 09/16/18 |
| Charlie Dolan   | The Data Warehouse Toolkit:<br>The Complete Guide to Dimensional Modeling                    | 07/20/18 |
| Kiya Mcguire    | How To Do Everything with Your Tablet PC   | 01/26/19 |
| Amal Terrell    | Data Mining:<br>Practical Machine Learning Tools<br>and Techniques with Java Implementations | 06/15/17 |

- View B

Description: This view is able to show the total number of books purchased by each customer. And this could be useful to see if this customer deserves a gift by making a certain amount of purchases in this store.

Relational algebra expression:

$$R1 \leftarrow PURCHASE \bowtie_{Customer=Email} Customer$$

$$Result \leftarrow_{Customer} \mathcal{F}_{COUNT\ Book}(R1)$$

```

1 CREATE VIEW CUSTOMER_N AS
2   SELECT P.Customer, COUNT(Book)
3   FROM PURCHASE AS P, CUSTOMER AS C
4   WHERE P.Customer = C.Email
5   GROUP BY P.Customer

```

Sample output:

|                     |   |
|---------------------|---|
| Ahmed.12@osu.edu    | 1 |
| Christian.2@osu.edu | 1 |
| Dolan.3@osu.edu     | 1 |
| Finnegan.1@osu.edu  | 1 |
| Firth.9@osu.edu     | 1 |

## 6. Sample Transactions for the Database

- Transaction A

Description: The customer adds a book to a order and update the book quantity in the inventory

```

1 BEGIN TRANSACTION NEW_P;
2
3 INSERT INTO PURCHASE
4 VALUES (22,
5         'Finnegan.1@osu.edu',
6         '782140661',
7         104.97,
8         DATE(),
9         'AMEX');
10
11 UPDATE Inventory
12     SET Quantity = Quantity - 1
13     WHERE Isbn = '782140661' AND Location = 'warehouse';
14
15 COMMIT;
```

- Transction B

Description: A certain amount(10) of books(Isbn: 616601654) transmitted from one inventory(warehouse) to another(in-sotre)

```

1 BEGIN TRANSACTION MOVE;
2
3 UPDATE Inventory
4     SET Quantity = Quantity + 10
5     WHERE Isbn = '782140661' AND Location = 'warehouse';
6
7 UPDATE Inventory
8     SET Quantity = Quantity - 10
9     WHERE Isbn = '782140661' AND Location = 'in-store';
10
11 COMMIT;
```

- Transaction C

Description: Customer redeem 100 reward points to a keychain

```
1 BEGIN TRANSACTION NEW_GIFT;
2
3 UPDATE ACCOUNT
4     SET Reward_point = Reward_point - 100
5     WHERE Email = 'Finnegan.1@osu.edu';
6
7 INSERT INTO GIFT
8 VALUES ('Finnegan.1@osu.edu', 'keychain');
9
10 COMMIT;
```

## 0.2 User Manual

### 1. Database Description

| Table     | Entity          | Attribute           | Data type    | Description   | Constraints  |
|-----------|-----------------|---------------------|--------------|---|--|
| BOOK      | book            | Isbn                | CHAR(13)     | The unique identifier of the book; The primary key                    | NOT NULL; fixed length of 13                                 |
|           |                 | Title               | VARCHAR(100) | Title of the book   | NOT NULL; Up to length 100                                   |
|           |                 | Price               | DECIMAL(5,2) | Price of the book   | NOT NULL; total 5 digits, two digits after the decimal point |
|           |                 | Year                | INT          | Year of the book got published  | NOT NULL   |
|           |                 | Category            | VARCHAR(100) | Category of the book  | NOT NULL; Up to length 100                                   |
| INVENTORY | inventory       | Isbn                | CHAR(13)     | The foreign key references to BOOK table; the primary key             | NOT NULL; fixed length of 13                                 |
|           |                 | Location            | VARCHAR(100) | Location of the inventory   | NOT NULL; Up to length 100                                   |
|           |                 | Quantity            | INT          | the number of books in inventory                                      |  |
| DISCOUNT  | discount        | Isbn                | CHAR(13)     | The foreign key references to BOOK table                              | NOT NULL; fixed length of 13                                 |
|           |                 | Buy_limit           | INT          | Purchase limit to apply the discount                                  |  |
|           |                 | Percentage          | REAL         | The discount applied to the book                                      | NOT NULL   |
| CUSTOMER  | customer        | Email               | VARCHAR(100) | The unique identifier of the customer; The primary key                | NOT NULL; Up to length 100                                   |
|           |                 | Name                | VARCHAR(100) | The name of the customer  | NOT NULL; Up to length 100                                   |
|           |                 | Phone               | CHAR(10)     | The phone of the customer   | fixed length of 10   |
|           |                 | Address             | VARCHAR(100) | The address of the customer   | NOT NULL; Up to length 100                                   |
| AUTHOR    | author          | Authorid            | INT          | The unique identifier of the author; The primary key                  | NOT NULL   |
|           |                 | Name                | VARCHAR(100) | The name of the author  | NOT NULL   |
| PUBLISHER | publisher       | Name                | VARCHAR(100) | The unique identifier of the publisher; The primary key               | NOT NULL; Up to length 100                                   |
|           |                 | Phone               | CHAR(10)     | The phone of the publisher  | fixed length of 10   |
|           |                 | Address             | VARCHAR(100) | The address of the publisher  | NOT NULL; Up to length 100                                   |
| GIFT      | gift            | Email               | VARCHAR(100) | The foreign key references to CUSTOMER table; The primary key         | NOT NULL; Up to length 100                                   |
|           |                 | Type                | VARCHAR      | The type of the gift  |  |
| ACCOUNT   | account         | Email               | VARCHAR(100) | The foreign key references to CUSTOMER table; The primary key         | NOT NULL; Up to length 100                                   |
|           |                 | Reward_point        | INT          | The reward point of the account                                       |  |
|           |                 | Recommendation_list | VARCHAR(500) | The recommendation list for the customer                              | Up to length 500   |
| WRITES    | author, book    | membership          | INT          | The level of the membership   |  |
|           |                 | Isbn                | CHAR(13)     | The foreign key references to BOOK table; One of the primary key      | NOT NULL; fixed length of 13                                 |
| PUBLISHES | book, publisher | Authorid            | INT          | The foreign key references to AUTHOR table; One of the primary key    |  |
|           |                 | Isbn                | CHAR(13)     | The foreign key references to BOOK table; One of the primary key      | NOT NULL   |
| PURCHASE  | customer, book  | Publisher           | VARCHAR(100) | The foreign key references to PUBLISHER table; One of the primary key | NOT NULL   |
|           |                 | Transaction_id      | INT          | The unique identifier of the purchase; The primary key                | NOT NULL   |
|           |                 | Customer            | VARCHAR(100) | The foreign key references to CUSTOMER table                          | NOT NULL; Up to length 100                                   |
|           |                 | Book                | CHAR(13)     | The foreign key references to BOOK table                              | NOT NULL   |
|           |                 | Date                | DATE         | The date of purchase  |  |
|           |                 | Card_type           | VARCHAR(100) | The type of the card that customer use to purchase                    | Up to length 100   |
|           |                 | Actual_Price        | DECIMAL(5,2) | The price of the transaction  | NOT NULL; total 5 digits, two digits after the decimal point |

### 2. Sample SQL Queries

- (a) Find the titles of all books by Pratchett that cost less than \$10

Return a table that contains the title of that books written by Pratchett and cost less than \$10

$$R1 \leftarrow BOOK * WRITES * AUTHOR$$

$$R2 \leftarrow \sigma_{Name=Terry\ Pratchett}(R1)$$

$$RESULT \leftarrow \pi_{Title, Name}(R1)$$

```

1 SELECT Title, A.Name
2   FROM BOOK AS B, WRITES AS W, AUTHOR AS A
3  WHERE B.Price < 10 AND A.Name LIKE 'Terry Pratchett'
4        AND (B.Isbn = W.Isbn AND W.AuthorId = A.AuthorId);

```

- (b) Give all the titles and their dates of purchase made by a single customer

Return a table that contains the title and date of the purchases made by a single customer

$$BOOKS \leftarrow BOOK \bowtie_{Isbn=Book} (\sigma_{Customer=Email}(PURCHASE))$$

$$RESULT \leftarrow \pi_{Title, Date}(BOOK)$$

```

1 SELECT B.Title, P.Date
2   FROM BOOK AS B, PURCHASE AS P, CUSTOMER AS C
3  WHERE B.Isbn = P.Book AND P.Customer = C.Email;
```

- (c) Find the titles and ISBNs for all books with less than 5 copies in stock  
Return a table that contains the title and ISBN for all books with less than 5 copies in inventory

$$STOCK(Isbn, Quantity) \leftarrow_{Isbn} \mathcal{F}_{SUM\ Quantity}(INVENTORY)$$

$$RESULT \leftarrow \pi_{Title, Isbn}(\sigma_{Quantity < 5}(STOCK))$$

```

1 SELECT B.Title, B.Isbn
2   FROM BOOK AS B, INVENTORY AS I
3  WHERE B.Isbn = I.Isbn
4  GROUP BY B.Title, B.Isbn
5  HAVING sum(I.Quantity) < 5;
```

- (d) Give all the customers who purchased a book by Pratchett and the titles of Pratchett books they purchased  
Return a table that contains the customers who purchased a book by Pratchett and the titles of Pratchett books they purchased

$$R1 \leftarrow \sigma_{Name='TerryPratchett'} AUTHOR * WRITES * BOOK$$

$$R2 \leftarrow BOOK \bowtie_{Book.Isbn=PURCHASE.Book} PURCHASE$$

$$R3 \leftarrow R2 \bowtie_{PURCHASE.Customer=CUSTOMER.Email} CUSTOMER$$

$$Result \leftarrow \pi_{R2.Name, R1.Title}(R3 * R1)$$

```

1 SELECT C.Email, C.Name, B.Title
2   FROM CUSTOMER AS C, BOOK AS B, PURCHASE AS PUR,
```

```

3      WRITES AS W, AUTHOR AS A
4  WHERE PUR.Book = B.Isbn AND PUR.Customer = C.Email
5      AND W.AuthorId = A.AuthorId
6      AND A.Name = 'Terry Pratchett';

```

- (e) Find the total number of books purchased by a single customer

Return a table that contains the total number of books a customer has purchased and the email of the customer

$$COUNT(Customer, \# \text{ of Books}) \leftarrow_{Customer} \mathcal{F}_{COUNT \text{ BOOK}}(PURCHASE)$$

$$RESULT \leftarrow \sigma_{Customer=Email}(COUNT)$$

```

1  SELECT P.Customer, COUNT(Book)
2  FROM PURCHASE AS P, CUSTOMER AS C
3  WHERE P.Customer = C.Email
4  GROUP BY C.Email;

```

- (f) Find the customer who has purchased the most books and the total number of books they have purchased

Return a table that contains the customer who has purchased the most books and the amount of the books they have purchased

$$COUNT(Customer, No) \leftarrow_{Customer} \mathcal{F}_{COUNT \text{ BOOK}}(PURCHASE)$$

$$RESULT \leftarrow_{Customer} \mathcal{F}_{MAX \text{ No}}(COUNT)$$

```

1  SELECT L.Customer, MAX(L.Num)
2  FROM PURCHASE AS P, CUSTOMER AS C,
3      (SELECT P.Customer AS Customer, COUNT(Book) AS Num
4       FROM PURCHASE AS P, CUSTOMER AS C
5       WHERE P.Customer = C.Email
6       GROUP BY P.Customer) AS L

```

- (g) Find the CUSTOMER with the most Reward\_point on his or her account

Return a table that contains the email and name of the customer who has the most reward point on his or her account

$$R1 \leftarrow ACCOUNT * CUSTOMER$$

$$RESULT \leftarrow_{CUSTOMER.Email, CUSTOMER.Name} \mathcal{S}_{MAXReward\_point}(R1)$$

```

1 SELECT C.Email, Name, MAX(A.Reward_point)
2   FROM CUSTOMER C, ACCOUNT A
3  WHERE C.Email = A.Email

```

- (h) Find the most expensive BOOK with all the DISCOUNT applied  
 Return a table that contains ISBN and title of books that has the most expensive price with applied discount

$$DIS\_BOOKS \leftarrow BOOK \bowtie DISCOUNT$$

$$RESULT \leftarrow_{ISBN, Title} \mathcal{F}_{MAX(Price*percentage)}(DIS\_BOOKS)$$

```

1 SELECT BOOK.Isbn, Title, MAX(Price*Percentage)
2   FROM (BOOK LEFT OUTER JOIN DISCOUNT)
3  WHERE BOOK.Isbn = DISCOUNT.Isbn

```

- (i) Find the total price of all the BOOK for each stock (quantity \* price)  
 Return a table that contains the total price of all the books and their ISBN for each stock

$$STOCK \leftarrow BOOK *_{ISBN} \mathcal{F}_{SUM\ Quantity}(INVENTORY)$$

$$RESULT \leftarrow \pi_{ISBN, Quantity * Price}(STOCK)$$

```

1 SELECT Isbn, SUM(Quantity * Price)
2   FROM BOOK NATURAL JOIN INVENTORY
3  GROUP BY Isbn

```

- (j) Provide a list of customer names, along with the total dollar amount each customer has spent.  
 Provide a list of customer names, along with the total dollar amount each customer has spent.

$$Customer\_spend \leftarrow CUSTOMER * (CUSTOMER \Join_{SUM Actual\_Price} (PURCHASE))$$

$$RESULT \leftarrow \Pi_{Name, SUM(Actual\_Price)} Customer\_spend$$

```

1 SELECT C.Name, SUM(P.Actual_Price)
2   FROM PURCHASE AS P, CUSTOMER AS C
3  WHERE P.Customer = C.Email
4  GROUP BY P.Customer

```

- (k) Provide a list of customer names and e-mail addresses for customers who have spent more than 50.

Return a table that contains the names and e-mail addresses of the customers who have spent more than 50.

$$\rho_{Total(Email, Total\_amount)}(CUSTOMER \Join_{SUM Actual\_Price} (PURCHASE));$$

$$CUSINFO \leftarrow Total * CUSTOMER;$$

$$RESULT \leftarrow \Pi_{Name, Email}(\sigma_{Total\_amount > 50}(CUSINFO))$$

```

1 SELECT C.Customer, C.Total_amount
2  FROM (SELECT P.Customer, SUM(Actual_Price) AS Total_amount
3        FROM PURCHASE AS P
4        GROUP BY P.Customer) AS C
5 WHERE C.Total_amount > 50;

```

- (l) Provide a list of the titles in the database and associated total copies sold to customers, sorted from the title that has sold the most individual copies to the title that has sold the least.

Return a table that contains the total number of each book that has been sold to customers, and the titles of those books, sorted by the number of books in descending number.

$$SOLD \leftarrow PURCHASE \Join_{Book=Isbn} BOOK$$

$$COUNT \leftarrow_{Isbn} \Join_{COUNT Book} SOLD$$

$$RESULT \leftarrow \Pi_{Title, COUNT Book} COUNT$$

```

1 SELECT B.Title, COUNT(P.Book)
2   FROM PURCHASE AS P, BOOK AS B
3  WHERE P.Book = B.Isbn
4  GROUP BY P.Book
5  ORDER BY COUNT(P.Book) DESC

```

- (m) Provide a list of the titles in the database and associated dollar totals for copies sold to customers, sorted from the title that has sold the highest dollar amount to the title that has sold the smallest.

Return a table that contains the total dollar amount of each book that has been sold to customers, and the titles of those books, sorted by the dollar amount in descending order.

$$SOLD \leftarrow PURCHASE \bowtie_{Book=Isbn} BOOK$$

$$\rho_{Total\_book(Isbn, count)} Isbn \bowtie_{COUNT(Book)} (SOLD)$$

$$RESULT \leftarrow \Pi_{Title, Count * Actual\_Price}(Total\_book)$$

```

1 SELECT B.Title, COUNT(P.Book)
2   FROM PURCHASE AS P, BOOK AS B
3  WHERE P.Book = B.Isbn
4  GROUP BY P.Book
5  ORDER BY COUNT(P.Book) DESC

```

- (n) Find the most popular author in the database (i.e. the one who has sold the most books)

Return a table that contains the name of the author who sold the most books

$$SOLD \leftarrow (PURCHASE \bowtie_{Book=Isbn} BOOK) \bowtie_{Book=Isbn} WRITES$$

$$\rho_{R1(Total\_amount)}(AuthorId \bowtie_{COUNT(Book)} (SOLD))$$

$$RESULT \leftarrow Name \bowtie_{MAX(Total\_amount)} (R1)$$

```

1 SELECT A.Name, MAX(Total)
2   FROM AUTHOR AS A, (SELECT A.AuthorId, COUNT(P.Book) AS Total
3                        FROM PURCHASE AS P, BOOK AS B, WRITES
4                        WHERE P.Book = B.Isbn AND B.Isbn = W.Isbn

```

```

5                                     GROUP BY W.AuthorId) AS R1
6 WHERE R1.AuthorId = A.AuthorId
7 GROUP BY A.AuthorId, A.Name

```

- (o) Find the most profitable author in the database for this store (i.e. the one who has brought in the most money)  
Return a table that contains the name of the author who brought in the most money and the dollar amount

$$\begin{aligned}
SOLD &\leftarrow (PURCHASE \bowtie_{Book=Isbn} BOOK) \bowtie_{Book=Isbn} WRITES \\
\rho_{R1(Total\_amount)}(AuthorId \bowtie_{COUNTBook}(SOLD)) \\
MAX &\leftarrow \bowtie_{MAX(Actual\_Price*Total\_amount)} Total\_Dollar * Total\_dollar \\
RESULT &\leftarrow \Pi_{Name, Actual\_Price*Total\_amount} MAX
\end{aligned}$$

```

1 SELECT A.Name, MAX(Total)
2 FROM AUTHOR AS A, (SELECT A.AuthorId, P.Actual_Price * COUNT(P.Book) AS Total
3                     FROM PURCHASE AS P, BOOK AS B, WRITES
4                     WHERE P.Book = B.Isbn AND B.Isbn = W.Isbn
5                     GROUP BY W.AuthorId) AS R1
6 WHERE R1.AuthorId = A.AuthorId
7 GROUP BY A.AuthorId, A.Name

```

- (p) Provide a list of customer information for customers who purchased anything written by the most profitable author in the database.  
Return a table that contains the information of customers who purchased anything written by the most profitable author

$$\begin{aligned}
SOLD &\leftarrow (PURCHASE \bowtie_{Book=Isbn} BOOK) \bowtie_{Book=Isbn} WRITES \\
\rho_{R1(Total\_amount)}(AuthorId \bowtie_{COUNTBook}(SOLD)) \\
Total\_dollar &\leftarrow \Pi_{Name, AuthorId, Actual\_Price*Total\_amount} R1 \\
Max\_author &\leftarrow ((Name, AuthorId) \bowtie_{MAX(Actual\_Price*Total\_amount)} Total\_Dollar) \\
CUS &\leftarrow CUSTOMER \bowtie_{Email=Customer} PURCHASE \\
Cust\_author &\leftarrow (CUS \bowtie_{Book=Isbn} WRITES) * Max\_author \\
RESULT &\leftarrow \Pi_{Name, Email, Phone, Address}(Cust\_author)
\end{aligned}$$

```

1 SELECT C.Name, C.Email, C.Phone, C.Address
2   FROM (SELECT A.AuthorId, MAX(Total)
3         FROM (SELECT A.AuthorId, P.Actual_Price * COUNT(P.Book) AS Total
4               FROM PURCHASE AS P, BOOK AS B, WRITES AS W
5               WHERE P.Book = B.Isbn AND B.Isbn = W.Isbn

72
73 DELETE FROM CUSTOMER
74 WHERE Email = 'email@email.com';

```

## 0.3 Appendix: Graded Checkpoints

### 0.3.1 Checkpoint 1

1. Based on the requirements given in the project overview, list the entities to be modeled in this database. For each entity, provide a list of associated attributes.
  - BOOK (Isbn, Title, Author(s), Year, Price, Category)
  - PUBLISHER (Name, Phone, Address)
  - CUSTOMER (Id, Email, Name, Address, Phone)
  - INVENTORY (Location, Quantity)
  - SALE\_RECORD (Transaction\_Id, Date, Card\_Type)

2. Based on the requirements given in the project overview, what are the various relationships between entities? (For example, “CUSTOMER entities purchase BOOK entities”).
  - PUBLISHER entities publish BOOK entities
  - CUSTOMER entities purchase BOOK entities, create SALE\_RECORD entities (ternary relation)
  - BOOK entities stores at INVENTORY entities
  
3. Propose at least two additional entities that it would be useful for this database to model beyond the scope of the project requirements. Provide a list of possible attributes for the additional entities and possible relationships they may have with each other and the rest of the entities in the database. Give a brief, one sentence rationale for why adding these entities would be interesting/useful to the stakeholders for this database project.
  - DISCOUNT (Percentage, Buy\_Limit)  
 Additional Relationships: DISCOUNT entities applies on BOOK entities Applying a DISCOUNT entities to BOOK entities, the final cost of that BOOK entities could be calculated automatically.
  - ACCOUNT (weak) (Acct\_No, Reward\_Point, Recommendation\_List, membership)  
 Additional Relationships: CUSTOMER entities may have ACCOUNT entities Enabling CUSTOMER entities to have their unique account could help the stakeholders to check information of a customer quicker when the customer is trying to make a purchase.
  - GIFT weak) (Type)  
 Additional Relationships: BOOKSTORE entities reward GIFT entities to CUSTOMER entities By applying GIFT entities, customers get rewarded once they spend a certain amount at the bookstore, which will maintain a good customer service.
  
4. Give at least four examples of some informal queries/reports that it might be useful for this database might be used to generate. Include one example for each of the additional entities you proposed in question 3 above.
  - Report all current inventory
  - Report sales summary
  - List all current accounts with membership
  - Show all discounted books
  - List all books from certain category
  - List all books by certain author
  - List all gifts that are rewarded to customer

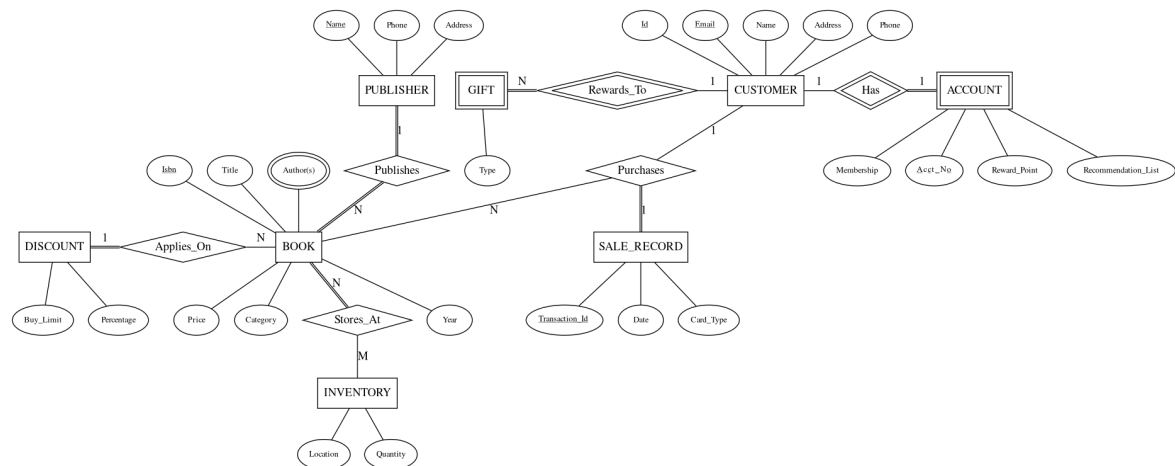

- Suppose we want to add a new publisher to the database. How would we do that given the entities and relationships you've outlined above? Given your above description, is it possible to add a new publisher to your database without knowing the title of any books they have published? If not, revise your model to allow for publishers to be added as separate entities.

Create PUBLISHER entities with attributes "Name", "Phone" and "Address", and have a relationship with BOOK entities which is PUBLISHER entities publish BOOK entities.

- Determine at least three other informal update operations and describe what entities would need to have attributes altered and how they would need to be changed given your above descriptions. Include one example for each of the additional entities you proposed in question 3 above.

- Change the price of a BOOK
- Update the INVENTORY of a BOOK
- Add Reward\_Point for a MEMBER
- Change the Percentage of a DISCOUNT
- Change the Type of GIFT
- Customers update their personal information (Email, Name, Address, Phone)
- Account's recommendation list can be altered according to changes in purchasing history

- Provide an ER diagram for your database. Make sure you include all of the entities and relationships you determined in the questions above INCLUDING the entities for question 3 above, and remember that EVERY entity in your model needs to connect to another entity in the model via some kind of relationship.

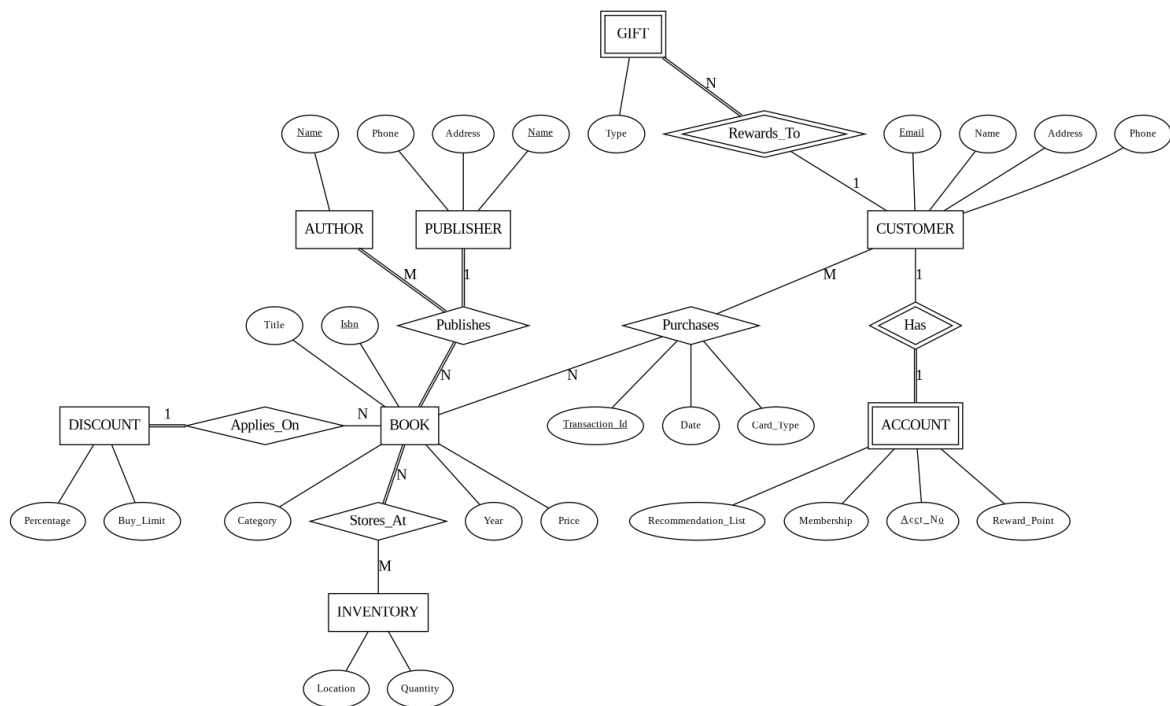

FIX:

- Yes, we can.

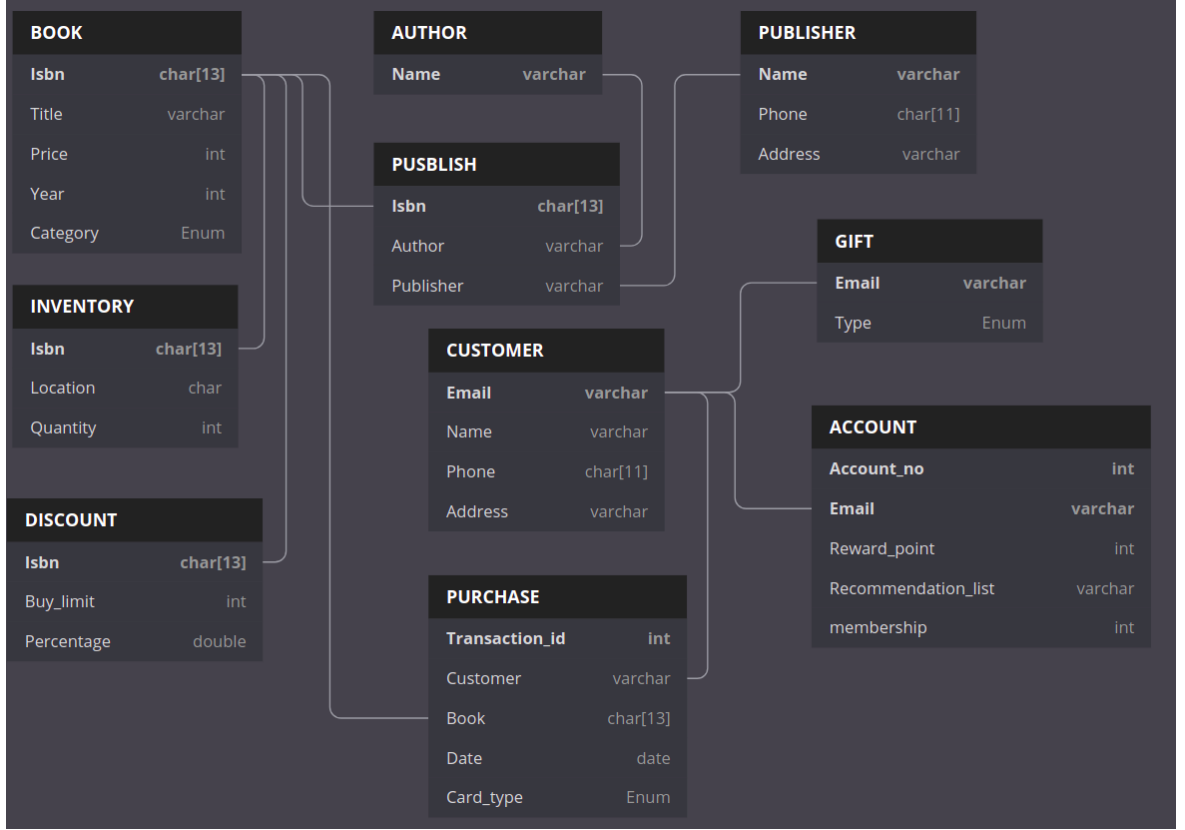

2. See section 1, page 1 for updated ER model.
3. See section 1, page 1 for updated ER model.
4. See section 1, page 1 for updated ER model.
5. ID is removed, See section 1, page 1 for updated ER model.
6. Yes, it is.

### 0.3.2 Checkpoint 2

1. Updated ER Model

2. Relational Schema

3. (a) Find the titles of all books by Pratchett that cost less than \$10

$$\pi_{Title}(\sigma_{Price < 10}(BOOK))$$

- (b) Give all the titles and their dates of purchase made by a single customer (you choose how to designate the customer)  
designate CUSTOMER with Email

$$BOOKS \leftarrow BOOK \bowtie_{ISBN=Book} (\sigma_{Customer=Email}(PURCHASE))$$

$$RESULT \leftarrow \pi_{Title, Date}(BOOKS)$$

- (c) Find the titles and ISBNs for all books with less than 5 copies in stock

$$STOCK(Isbn, Quantity) \leftarrow_{Isbn} \mathcal{F}_{SUM\ Quantity}(INVENTORY)$$

$$RESULT \leftarrow \pi_{Title, Isbn}(\sigma_{Quantity < 5}(STOCK))$$

- (d) Give all the customers who purchased a book by Pratchett and the titles of Pratchett books they purchased

$$PRATCHETTS \leftarrow (\sigma_{Author=Pratchett}(PUBLISH) * BOOK)$$

$$SALES \leftarrow (PRATCHETTS * PURCHASE)$$

$$RESULT \leftarrow (\pi_{Email, Name, Title}(SALES))$$

- (e) Find the total number of books purchased by a single customer (you choose how to designate the customer)

$$COUNT(Customer, \# \text{ of Books}) \leftarrow_{Customer} \mathcal{F}_{COUNT \text{ BOOK}}(PURCHASE)$$

$$RESULT \leftarrow \sigma_{Customer=Email}(COUNT)$$

- (f) Find the customer who has purchased the most books and the total number of books they have purchased

$$COUNT(Customer, No) \leftarrow_{Customer} \mathcal{F}_{COUNT \text{ BOOK}}(PURCHASE)$$

$$RESULT \leftarrow_{Customer} \mathcal{F}_{MAX \text{ No}}(COUNT)$$

4. (a) Find the CUSTOMER with the most Reward\_point on his/her account

$$CACCT \leftarrow CUSTOMER * ACCOUNT$$

$$RESULT \leftarrow \pi_{Email, Name}(Email, Name \mathcal{F}_{MAX \text{ Reward\_point}}(CACCT))$$

- (b) Find the most expensive BOOK with all the DISCOUNT applied

$$DIS\_BOOKS \leftarrow BOOK \bowtie DISCOUNT$$

$$RESULT \leftarrow_{Isbn, Title} \mathcal{F}_{MAX(Price*percentage)}(DIS\_BOOKS)$$

- (c) Find the total price of all the BOOK for each stock (quantity \* price)

$$STOCK \leftarrow BOOK *_{Isbn} \mathcal{F}_{SUM \text{ Quantity}}(INVENTORY)$$

$$RESULT \leftarrow \pi_{Isbn, Quantity * Price}(STOCK)$$

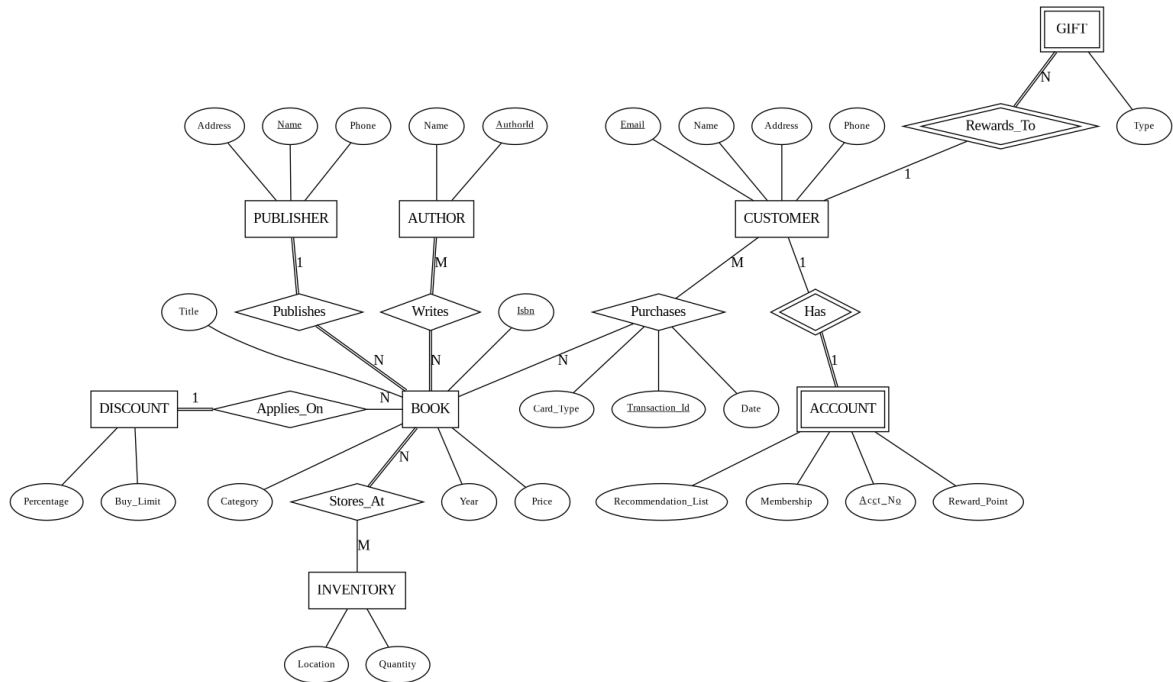

FIX:

1. See section 1, page 1 for updated ER model.
2. See section 1, page 1 for updated ER model.
3. Primary Keys in ER diagram is marked with underline
4. See section 2, page 6 for updated relational algebra
5. There might be more than one INVENTORY, so it is
6. Checked

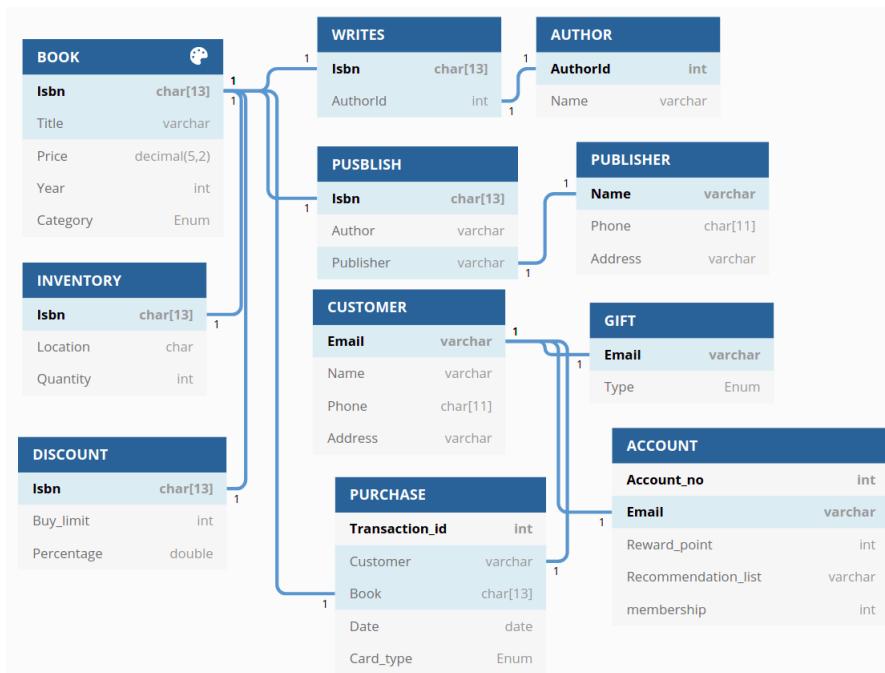

### 0.3.3 Checkpoint 3

#### Part 1

- Updated ER Model

- Updated Relational Schema

## Part 2

### 1. Question 1

```
1 CREATE TABLE BOOK(

  - **PUBLISHER**: Name -> Address, Phone
  - **AUTHOR**: AuthorId -> Name
  - **CUSTOMER**: Email -> Name, Address, Phone
  - **ACCOUNT**: Customer\_Email -> Membership, Reward\_Point, Recommendation\_List
  - **PURCHASE**: Transaction\_Id -> Customer, Book, Card\_type, Date
  - **PUBLISHES**: Isbn -> AuthorId, Publisher\_Name
  - **WRITES**: Isbn -> AuthorId
3.
  - Book: BCNF
  - Publisher: BCNF
  - Author: BCNF

- Customer: BCNF
- Account: BCNF
- Purchases: BCNF
- Publishes: BCNF
- Writes: BCNF

4. N/A

5. Two Views:

(a) View A

```

1 CREATE VIEW CUSTOMER_P
2     AS
3     SELECT B.Title, P.Date
4     FROM BOOK AS B, PURCHASE AS P, C AS CUSTOMER
5     WHERE B.Isbn = P.Book

```

(b) View B

```

1 CREATE VIEW CUSTOMER_N
2     AS
3     SELECT P.Customer, COUNT(Book)
4     FROM PURCHASE AS P, CUSTOMER AS C

```

FIX: N/A
